

Let me walk you through a detailed example of how the impact scoring calculation works:

Example Article: "FDA Issues New Guidance on Biosimilar Manufacturing Standards"

Step 1: Regulatory Change Classification (+2-3 points)

Type: Guidance Change (FDA interpretive policy)

Points Awarded: +3 points

Reasoning: New FDA guidance document that provides binding interpretation for biosimilar manufacturing

Step 2: Cross-Functional Impact Assessment (+1-4 points)

Functions Affected:

Regulatory Affairs (submission strategies)

Manufacturing & Quality (new standards)

Clinical Development (comparability studies)

Commercial Operations (market access)

4 Functions Affected = +3 points

Step 3: Scope Determination (+0-4 points)

Product Impact: Multiple biosimilar products in Amgen's portfolio

Process Impact: Manufacturing processes across facilities

Scope: Multiple Product Lines = +2 points

Step 4: Remediation Complexity (+0-4 points)

Required Actions:

Process validation updates

Regulatory submissions (CBE-30)

System changes and testing

12-18 month timeline

System Changes + Regulatory Submissions = +3 points

Final Calculation:

Regulatory Change: +3 points

Cross-Functional: +3 points

Scope: +2 points

Remediation: +3 points

TOTAL SCORE: 11 points → Capped at 10

FINAL SCORE: 10/10

IMPACT LEVEL: Extremely High

Copy

Reasoning Output:

"Major FDA guidance change (+3) affecting Regulatory Affairs, Manufacturing, Clinical Development, and Commercial Operations (+3). Impacts multiple biosimilar product lines across Amgen's portfolio (+2). Requires system changes, process validation, and regulatory submissions with 12-18 month implementation timeline (+3). Total comprehensive impact score: 10/10 (Extremely High Impact)."

Simpler Example: "CMS Updates Reimbursement Documentation Requirements"

Calculation:

Regulatory Change (Policy): +2 points

Cross-Functional (2 areas): +2 points

Scope (Process only): +0 points

Remediation (Documentation): +0 points

TOTAL SCORE: 4/10

IMPACT LEVEL: Moderate

Copy

This systematic approach ensures consistent, objective scoring based on real business impact factors.

What do you mean by (+2-3 points) in Step 1: Regulatory Change Classification (+2-3 points)

Context

The (+2-3 points) means you can award anywhere between 2 to 3 points based on the severity and importance of that specific guidance change.

Here's how it works:

Guidance Changes: +2-3 points range

+2 points = Minor guidance change

Clarification of existing requirements

Administrative updates

Limited impact on operations

+3 points = Major guidance change

New interpretive policies

Significant operational changes required

Broad industry impact

Example with same article:

Article: "FDA Issues New Guidance on Biosimilar Manufacturing Standards"

Decision Process:

Is this a minor clarification? → +2 points

Is this a major new requirement? → +3 points

In our example: This is a major new guidance affecting manufacturing standards across the industry → +3 points

All Categories Have Ranges:

Regulation Changes: +3-4 points

└─ +3 = Standard regulation

└─ +4 = Critical/urgent regulation

Guidance Changes: +2-3 points

└─ +2 = Minor guidance

└─ +3 = Major guidance

Standards Changes: +1-2 points

└─ +1 = Technical updates

└─ +2 = Major standards overhaul

Policy Changes: +2-3 points

└─ +2 = Routine policy updates

└─ +3 = Major policy shifts
